Key Highlights

- Developed scalable ML pipelines with Kubernetes, Airflow, and Docker
- Built ML frameworks for sentiment prediction and misinformation detection
- Experience deploying deep learning models with PyTorch and MLOps

Work Experience

Research Engineer Data Science

Nanyang Technological University

May 2024 – Present

Singapore

- Led the computational analysis for the 'Information and Perception Analysis in Online Groups' project, Developed an **LLM-powered system** for discourse detection, author classification, and network analysis.
- Developed a machine learning framework using user roles, topics, and sentiment trends with **90.91%** accuracy in predicting sentiment shifts.
- Led a 4-member team to build an LLM-powered AI scraper for misinformation detection, processing **1M+ data points**.

Research Assistant Artificial Intelligence

NUS Human Computer Interaction Lab

Jul 2022 – Nov 2023

Singapore

- Developed an advanced eye gaze recognition model utilizing graph neural networks and progressive optimization, achieving **98%** precision.
- Enhanced data processing on a 10-gesture dataset, achieving **97.67%** accuracy on unseen data.
- Benchmarked model performance against ANN, CNN, GRU, and LSTM, achieving a **4% improvement in accuracy**.

Software Engineer R&D

Hewlett-Packard Enterprise

Jan 2019 – Oct 2021

Bengaluru, India

- Drove the development of HPE's proprietary Storage Solution (SEMC), in 6 Support Program Releases and drastically reducing post-release bug reports by **34%**.
- Actively collaborated with **cross-functional teams** to enhance system robustness and UX by using React/Node.js to engineer reusable UI components.
- Collaborated with Japanese teams on localization, improving **global user adoption**. Streamlined CI/CD pipelines using GitHub, Jenkins, and Agile methodologies.

Education

National University of Singapore

Masters in Computing, Artificial Intelligence specialization (Dissertation Track)

Jan 2022 – Jan 2024

SRM Institute of Science and Technology

Bachelor of Technology in Computer Science and Engineering

Aug 2015 – May 2019

Research and Live Projects

Research & Thesis:

- **Modeling Sentiment Shifts in Online Communities** – Developed an ML framework with **90.91% accuracy** to predict sentiment shifts and manage misinformation.
- **Shaping Sentiments in Crisis Discussions** – Analyzed the interplay of user roles and topics in shaping discourse across social media platforms, applying topic modeling to study crisis communication dynamics.
- **Eye-Gaze Pattern Recognition (Master's Thesis)** – Built a neural network-based model (ANN, CNN, GRU, LSTM, GCN) for gaze detection.
- **Face Spoofing Detection (Bachelor's Thesis)** – Designed an SVM-based model with feature engineering to detect fraudulent facial attacks on authentication systems; **published in IJEAT, 2019**.

Live Web Applications:

- **ATS Resume Expert** - Designed a resume analysis tool using Google Gemini AI for ATS scoring and skill enhancement.
- **ML Regression Comparison App** - Developed a regression analysis platform with model selection and hyperparameter tuning capabilities.
- **Multi-Language Invoice Extractor** - Built a multilingual invoice processing system leveraging Google Gemini Pro, FAISS & ChromaDB, for semantic document retrieval and AI-powered search.
- **Chat with Multiple Docs** - Created an interactive document assistant for seamless PDF search and knowledge retrieval.

Technical skills

Tech Stack: Python, PyTorch, TensorFlow, Scikit-Learn, Keras, LLMs, LangChain, NLP, OpenAI API, Hugging Face

MLOps & Data Engineering: FAISS, ChromaDB, Pinecone, AWS, Azure, Docker, Kubernetes, Airflow, CI/CD, MLflow, Hadoop, Spark, SQL, NoSQL, Grafana.

Additionally: LLM(RAG, Chain of Thought, Fine-Tuning), NLP, Transformers (BERT, GPT), Time-Series Analysis, Predictive Analytics, Clustering, Feature Engineering
